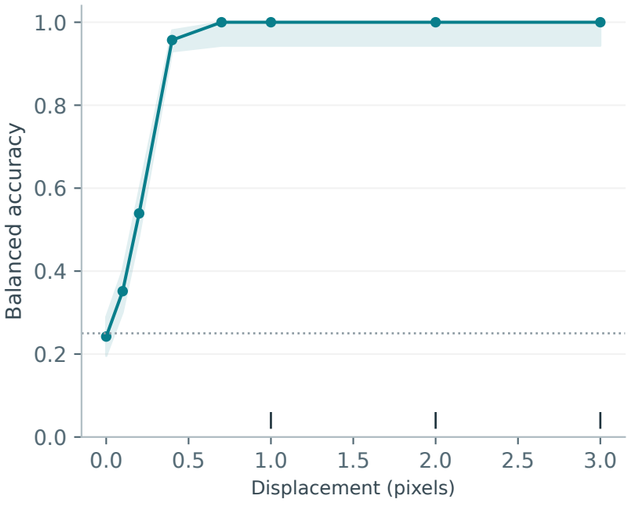
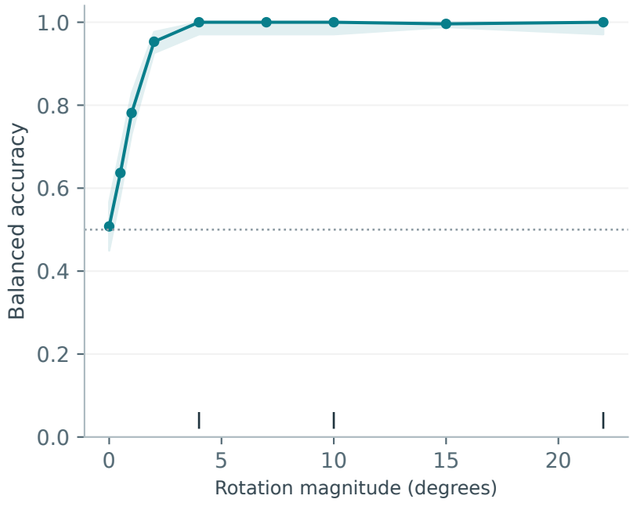
How performance changes with evidence and memory demand

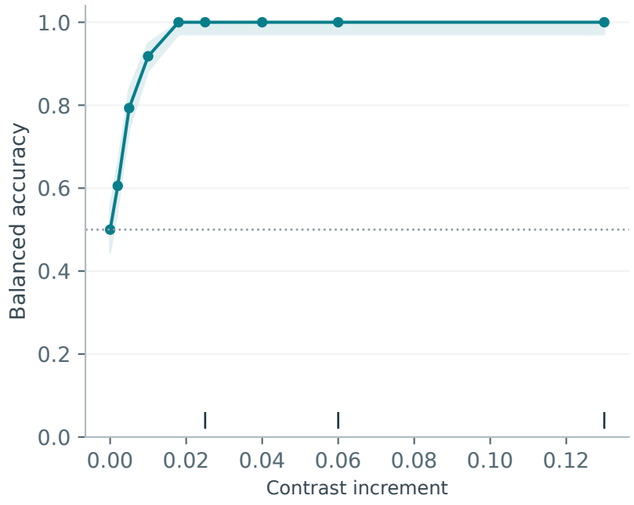
Motion direction



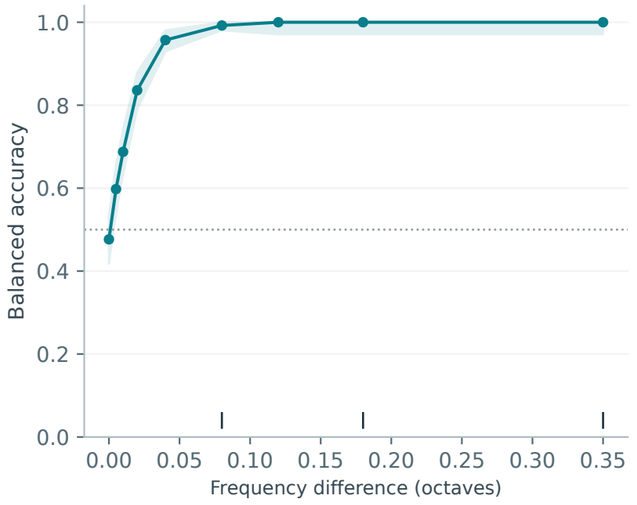
Orientation



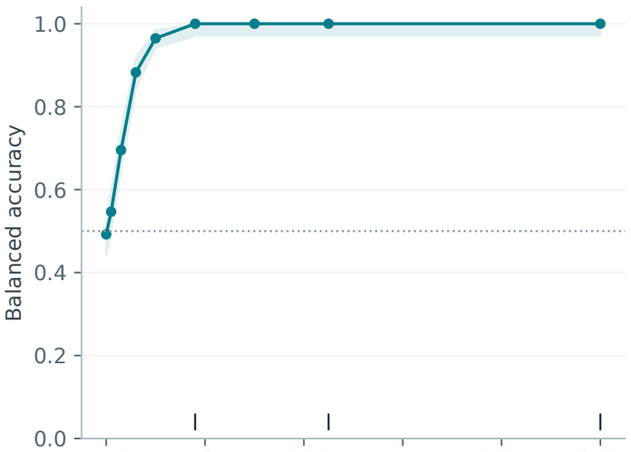
Contrast



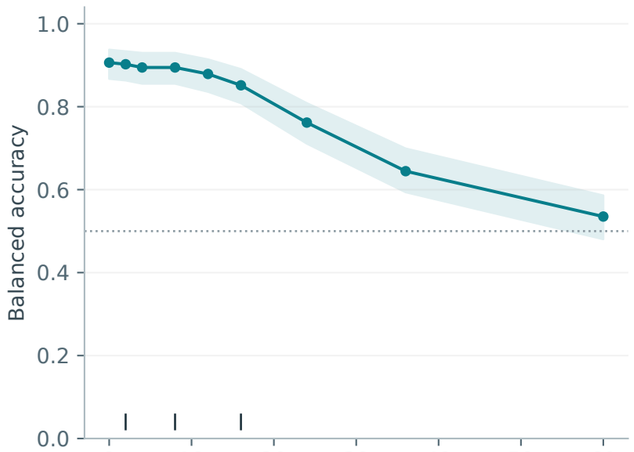
Spatial frequency



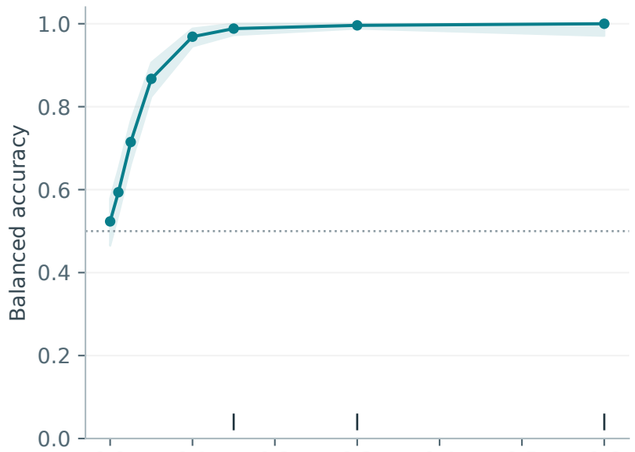
Chromatic increment



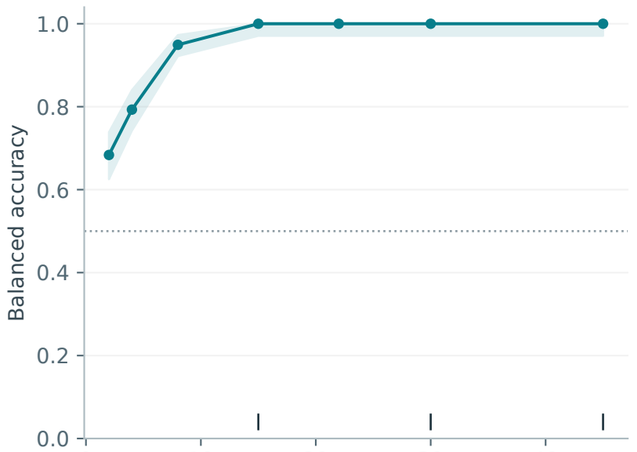
Contour integration



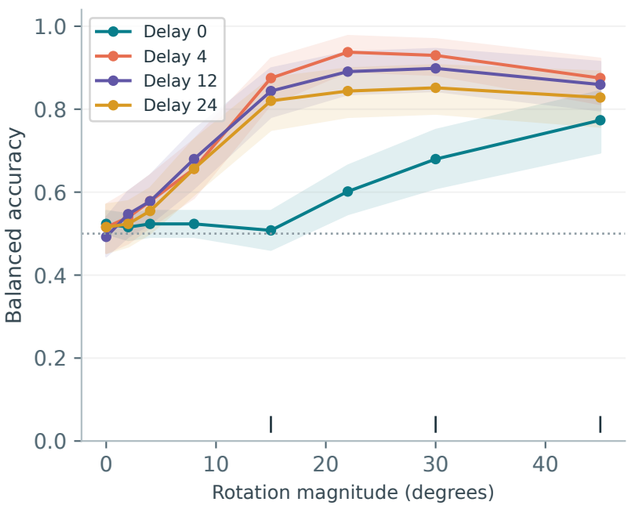
Natural spectrum



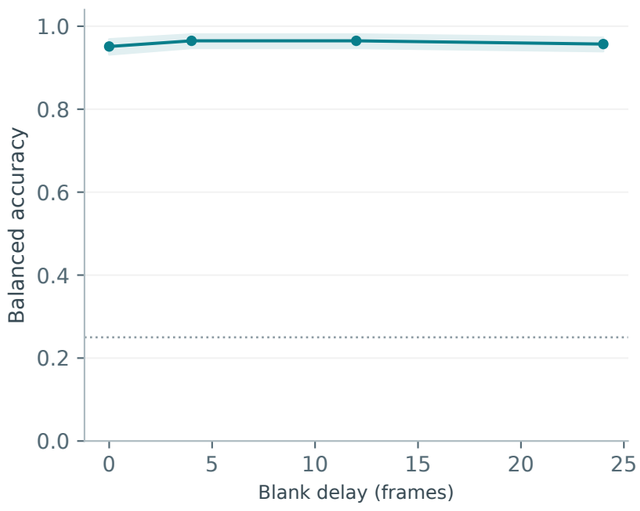
Ring-cued orientation



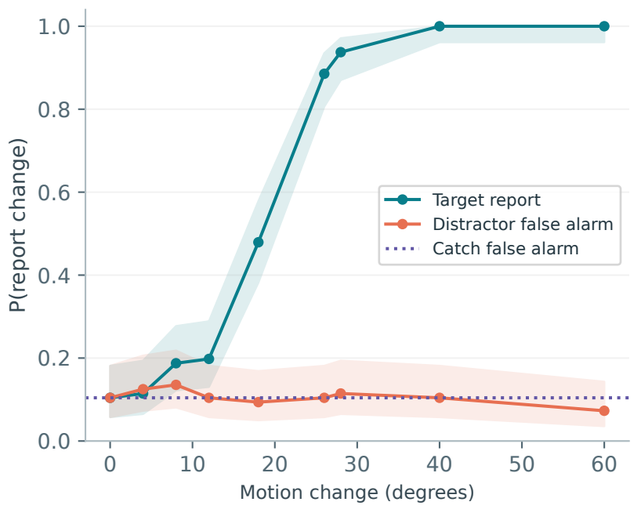
Sign-cued orientation



Motion-duration memory



Krauzlis selection



Spatial binding

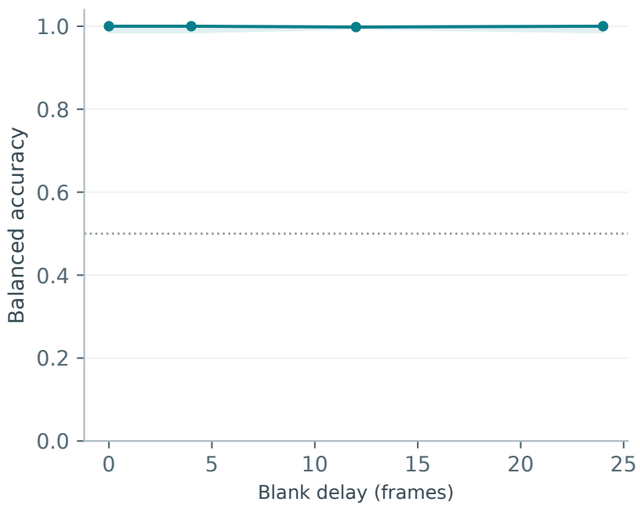


Image recognition

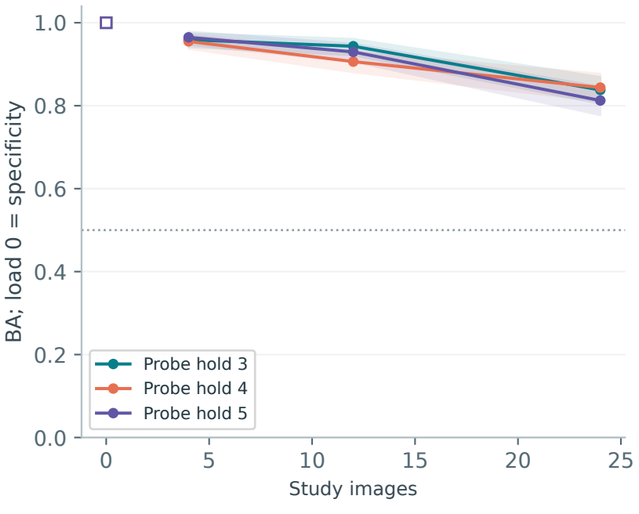

Frozen checkpoint 54,808

Shading: pointwise 95% intervals.
Black ticks: original training strengths.
New strengths test graded sensitivity.

Zero-angle points have scheduled labels;
there is no physical direction change.
Contour jitter increases difficulty.

One trained model, fresh trial seeds.
Curves connect observed points;
no sigmoid has been imposed.
