VDA-9: 100% bottom-right cue, top-left change
Bottom-right inhibition −4 only during frames 5–6

t=0 · blank | t=1 · cue | t=2 · blank delay | t=3 · sample | t=4 · sample | t=5 · change | t=6 · change

Actual input

Unchanged: overlay

Unchanged: map

BR inhibited: overlay

BR inhibited: map

Inhibited: condition mean

Rows 1–5: the same individual movie. Last row: 48-scene condition mean, pooling colors and signs.
All maps use the same logarithmic color scale: 0.0001 to 1 attention mass per patch; dark to bright.
